

# Vercator® Registration Service

## Overview of the Service

Vercator's service automatically registers 3D point cloud datasets to which access is given by account holders. The service is delivered from the cloud.

Newcomers may open an account giving a free but limited trial by completing a short online trial sign-up form and, later, a longer form for a commercial account (see the product page at Vercator.com).

Registered subscribers may nominate individual operators who are permitted to use the service, and, for commercial account holders, at their cost. All users each select their own password.

To start a new job, users provide a link to their datasets held in accessible cloud storage and select

certain output preferences. Vercator software then runs automatically until it invites users to inspect and, if necessary correct, the resulting interim coarse registration. Approval triggers a further automatic process leading to fine registration which may then be visualised by users before acceptance.

Once accepted and, for commercial users, our fees have been paid, fully registered datasets are exported to them and/or their nominated recipients. (Trial users are entitled to a limited release only.) Release is either by export to user-designated cloud storage or by download to a terrestrial server. The datasets remaining on the Vercator cloud are then either archived or deleted at the user's option.

	under user control		under Vercator control
1	apply for an account at <a href="http://vercator.com">vercator.com</a>	<b>web portal</b>	issue account opening confirmation
2	logon by nominated users who <ul style="list-style-type: none"> <li>▪ select unregistered scans / data</li> <li>▪ apply process settings / opt-outs</li> <li>▪ trigger coarse registration</li> </ul>		
3	<i>Allow Vercator software to run</i>		effect automatic coarse registration
4	Visualise coarse registration <ul style="list-style-type: none"> <li>▪ correct errors using Vercator tools; once approved ...</li> <li>▪ trigger fine registration</li> </ul>		
5	<i>Allow Vercator software to run</i>		effect automatic fine registration
6	Visualise fine registration <ul style="list-style-type: none"> <li>▪ revert to coarse registration stage to correct any errors</li> <li>▪ once approved, pay fee</li> </ul>		On receipt of payment, export registered datasets as instructed
7	Instruct archival storage or deletion		Archive or delete as instructed

The Vercator registration service is supplied by

**Correvate Limited**

# Vercator<sup>®</sup> Registration Service

## Procedures, responsibilities, restrictions and limitations

VT&C 7/19

### 1) Trial subscription

- a) Any new subscriber may ask for a free limited trial by completing a trial subscription form; this requires a brief profile of their business activities and acceptance of these terms of service.
- b) The trial allows the upload and then registration of datasets which may be visualised, but the export of registered datasets is limited to no more than 10 scans per trialist, which datasets may not be used for any commercial purposes.
- c) Data from the trial held in Vercator's host storage is deleted after 60 days unless the user has become a commercial subscriber.
- d) Participation in this trial is free of charge.

### 2) Commercial subscription

- a) Prospective commercial clients should complete our commercial subscription form which provides us, in confidence, with ▪ their business profile, ▪ the contact details of their **lead administrator** (see below) ▪ contact details of their **financial accountant** ▪ their preferred channels for making payments (the choices being set out in our tariff which specifies our subscription and usage fees).
- b) Applicants must confirm that they are authorised to represent their company and that their company accepts these terms of service.

### 3) Administration of accounts

- a) **Lead administrators** have the power to nominate those colleagues who may use the Vercator service on their subscriber's account and to cancel any such nomination. Accordingly, they have the responsibility to track, manage usage, and ensure payment for usage by those who obtain login rights. A lead administrator also has the power to appoint and deselect other administrators, each having the same powers and responsibilities as the initial lead administrator, including the power to appoint and deselect users and other administrators.
- b) **Nominated users** must create for future login and then manage any change in their password. Where a valid password has been used at login, we accept no liability for the unauthorised use of the related account.
- c) Subscribers, administrators and users have no right of access to Vercator software and its embedded third party programs, nor do they have any rights to improvements to Vercator software that may be introduced as a result of providing services to them.

### 4) Uploading unregistered scans & data

- a) Users' point cloud datasets and supporting data must be supplied in a format supported by Vercator software: it must be complete, include scan-pair information, and be available for transfer to the Vercator service hosted on the Amazon Web Services platform.
- b) We shall receive original data 'as is' and shall have no responsibility to correct any errors in it, however manifest.
- c) The material should not infringe any third party's rights (eg an originator's creative rights or a property owner's rights of privacy), nor offends against good taste and common decency. Users will be responsible for the financial and other consequences of any shortcomings in these areas.

### 5) Access to and use of customer data:

- a) We shall retain uploaded data only for the duration of the job and then retain it until expiry of paid-for storage (as specified in our tariff) or earlier if deletion is requested by a lead administrator.

- b) We hold customers' data and datasets subject to these conditions:

- (i) we shall not disclose to or permit access by third parties to the datasets unless, first, on the written instruction of the user or, secondly, pursuant to a valid regulatory requirement and then not without first giving the user the right to appeal against disclosure
- (ii) we shall be permitted to collect statistical data to be used in support of fee calculation, and also, in anonymised form only, for promotional purposes
- (iii) we may publicise the name of each commercial subscriber.

### 6) Applying settings

It is the user's responsibility to complete the settings prior to triggering coarse registration, having regard to our [guidance notes](#). We shall have no liability for any shortcomings in the registration process that arise from the use of erroneous or default settings.

### 7) Correcting misalignments

- a) It is the user's responsibility to identify misalignments at the coarse registration stage and then correct them using the tools available within the software. Help in using these tools is available through our 'chatbot' and/or 'support service' accessed via our portal.
- b) Misalignments identified at the fine registration stage may be corrected by reverting to the coarse registration stage and then using the available tools for correction.
- c) We shall have no liability for the consequences of any residual misalignments.
- d) Vercator's visualisation facility enables users to inspect the results at each stage of the registration process; such visualisation may not be shown to third parties as a separately chargeable service.

### 8) Export of registered scans

- a) We export registered scans (by way of download or by transfer to cloud sectors controlled by users and/or their nominees) only once the user has approved the registration result and our fees have been paid in accordance with our [tariff](#).
- b) The registered scans are 'Derived Works' which are forthwith owned by the client (subject to any third party prior interests) but subject to the terms of clause 5.
- c) Subscribers may publicise the fact that the Derived Works have been created using Vercator's registration service.

### 9) Termination

- a) A subscriber may discontinue use of Vercator services at any time by withholding payment of subscription fees due under our [tariff](#). Their account will then be managed in our 'run-down mode' as described in our FAQs.
- b) We may, on notice, decline to supply services to any subscriber who is in breach of these provisions, whereupon their account will be managed in our 'run-down mode'.

### 10) Choice of law

Our registration services are supplied from a cloud platform that is controlled from England. Accordingly, these terms of service shall be interpreted and applied in accordance with English law.
